Happy World Water Day! □□□□ Held on 22 March every year since 1993, World Water Day focuses on the importance of freshwater and raises awareness of the 2.2 billion people living without access to safe water.

Did you know that freshwater sources, like rivers and lakes, are intricately linked to the health of our oceans? Here at MARBEFES, we are dedicated to safeguarding marine environment and highlighting crucial ecosystem services provided by the seas.

On this important day, let us renew our commitment to conserving our precious marine resources and fostering a healthier planet for all.
