We invite you to participate in a webinar presented by our colleague Mike Elliott.

This webinar will present and explain cause-consequence-response frameworks and the way these relate to managing marine, coastal and estuarine areas. It will then show the importance of determining the footprints of activities, pressures, and natural and human effects and assessing cumulative effects. Following this, it will consider the footprints of management responses and will demonstrate horizontal management across sectors and vertical management from the local to the global and vice versa. It will look at the importance of transboundary implications of marine management, considering connectivity, coherence, and equivalence. Finally, it will consider the way in which success in marine management is measured, including indicators of success. Examples from Europe and North America will be used, but the topics are relevant to marine areas worldwide.

Hosted by: OCTO

When: Tuesday, July 8, 11 am US EDT/8 am US PDT/3 pm UTC/4 pm BST/5 pm CEST at ZOOM
