

Sopot, 16-17 June 2023

Bioblitz 2023 was organized in the area of Park Północny (North Park) between Grodowy Stream and Swelina. On June 16, we focused on collecting materials, and on June 17, at the IO PAN garden located at Powstańców Warszawy 55, we demonstrated how to identify species. This time, alongside traditional field biologists, molecular biologists from EMBL (European Molecular Biology Laboratory), a global leader in organism identification techniques using genomics, also participated.
