and Integrated Management: “There's a crack, a crack in everything, that's how the light gets in”!

This article is published as an Open Access Green in Marine Pollution Bulletin, Elsevier.

This article attempts to clarify the ecosystem services concept while also proposing such an integrative model. If such a model can be agreed then it would enable a recipe for assessing and managing human activities in the sea. Such a model would need to merge the natural and social sciences, not least to include concepts regarding the ecosystem services and societal goods and benefits provided by our oceans.
